

# Lexlegis.ai Set to Help with Legal Research

**NEW DELHI:** Legal technology startup Lexlegis AI on Thursday launched a large language model (LLM)-based platform, which it said can help make research, analysis and drafting by legal practitioners more efficient by reducing the intensive manual hours that generally go into it. A GenAI querying model called 'Ask' has gone live, while 'Interact', which will help summarise information, and 'Draft', which will help draft legal documents, are in beta testing and work-in-progress stages, respectively, and will be live this fiscal, according to Lexlegis CEO Saakar Yadav. He said India's legal backlog, which exceeds 44.9 million cases, underscores the urgent need for innovative solutions to tackle this crisis. —Our Bureau
