

Lexlegis.ai Launches Legal AI Platform to Empower Tax and Legal professionals

Rahul Kaul

New Delhi: Lexlegis.ai,

a pioneering legal tech solutions enterprise, today announced the launch of India's first large language model (LLM)

specifically designed for the legal-tech sector.

This groundbreaking AI tool is set to revolutionize legal research by delivering unprecedented accuracy and reliability. The platform assists legal practitioners by providing issue-specific judgments and precise citations, significantly reducing the manual effort involved in compiling extensive case documents for Indian courts.

With India's judicial system currently grappling with over 44.9 million pending cases, Lexlegis.ai offers a transformative

solution. The platform leverages advanced algorithms to accelerate legal research, transforming weeks of work into mere seconds. Built on a vast

repository of cases across diverse legal domains, Lexlegis.ai empowers advocates, lawyers, and legal teams to navigate the complexities of the legal landscape more efficiently.

The AI's capabilities extend beyond research; it can scan and analyze legal documents, identify relevant information, and flag inconsistencies, drastically reducing the time spent on

manual reviews. Lexlegis.ai is a versatile tool designed for use by law firms, government departments, corporate legal teams, SMEs, and independent legal professionals.

The overwhelming backlog of cases in India's courts has rendered traditional legal research methods insufficient.

Lexlegis.ai's 'Ask' feature, a core component of the platform, delivers precise legal answers in

seconds, drastically cutting down research time. This AI-powered tool is poised to enhance the efficiency of advocates, freeing up time for more critical tasks and addressing the inefficiencies that plague the legal system.

Speaking on the launch, Saakar S. Yadav, Founder and CEO of Lexlegis.ai, remarked, "India's legal backlog

exceeds 44.9 million cases, underscoring the urgent need for innovative solutions to tackle this crisis. Lexlegis.ai is designed to empower judiciary and legal professionals with AI-driven tools that simplify and sharpen research. Our forthcoming features, Interact and Draft, will further streamline legal processes, enabling professionals to save time and improve accuracy. We intend to introduce more workflows and processes to practice management platform not only in India but even in other countries in near future."

Highlighting the critical role of AI in the legal sector, Suhail Nathari, Managing Partner, Economic Laws Practice (ELP), stated, "Lexlegis has set the ball rolling by delivering a high-quality AI tool in a complex and enormous area of information. They are a pioneer in what is undoubtedly the future of the knowledge industry. ELP is proud to be part of this trail-blazing journey with them."
